

Dear Sir/Madam:

I am a current subscriber to XM Satellite Radio Service. One of the many unique features among the many offered by XM are localized Instant Traffic and Weather services. As a commuter, I have come to depend upon this service, which is far superior to that provided by local radio stations because XM provides stations dedicated solely for traffic and weather updates that are very frequently updated. With XM, I have access to very updated information that is easily understandable.

XM also provides unique programming by providing musical genres and other programming that is not available through traditional radio services. While AM and FM are still important in their own regard, XM fills in gaps and providing services without commercial interruption on most stations and with very high fidelity sound.

I urge you to to allow XM Satellite Radio to continue their programming formats and services.
